SKILLS

PROJECTS

Traffic Hazards Perventation Tool for children (09/2021 - 08/2022)

- In this research based FYP project, we are developing a web and mobile-based game tool to teach children about traffic hazards. My responsibility in the project is to build and manage the back-end and front-end of the web and mobile application. It is a .Net Core web and React Native Mobile Application based on Deep Learning platform.

TyroPlus

- The product was developed for the company's UK-based client. In product, there were five business managing modules, such as Payroll, Corporation Tax, Accounts Production, BookKeeping, and Self-Assessment. My role and responsibility in the project were from architectural designing of the system to the front-end and back-end development. The product was developed by a team of 4 developers

FOERP

- An ERP system was built for a client of the company. In this web-based system, the different ERP Modules were developed to manage the entire business process of the Organization. I was involved in the entire development process of the system. Asp.net core MVC web framework, MS SQL Server Database, Ado.net ORM, JavaScript, jQuery and Bootstrap were used to develop the web application.

Smart Medicare System

- A web application portal developed for medical clinics for patient registration, organizing data, and scheduling of appointments with doctors. It is Developed using Asp.net MVC 5, Ado.net, MS SQL SERVER database for backend, and Html5, Css3, Bootstrap, Javascript for frontend.

MultiObject Detector

- Developed An AI-based system in my Artificial Intelligence course to detect multiple objects in real-time and from images. Haar Cascading, ML Algorithms, and OpenCV were used to develop the system.
